

Build Forge® Intermediate

WINDOWS

ID: BF-INT-WIN

Overview

This one-day, hands-on course covers the essentials of creating a Build Forge project.

Prerequisites

- Island's *Build Forge Fundamentals* course

Objectives

At the end of this course, students will be able to code and maintain Build Forge projects of small to medium complexity.

Outline

Creating Projects	Creating a project and steps
Step Directory	Working with relative and absolute paths
Tag Formats	Creating and using project tags, tag variables, and date/time system variables
Variable Basics	Creating and editing environment groups
Variable Actions	Setting environment actions; understanding environment precedence
Variable Advanced	Nested environments and run-time changes to environment variables
Results/Filters	Specifying a filter to determine success or failure of a step
Notify	Notify access group on event occurrence
Broadcast	Running a step on every server that matches the step's selector
Thread	Running steps in parallel
Inline Projects	Chaining projects with a step's inline field
Pass/Fail Chaining	Chaining projects with a step's pass/fail fields
Selectors	Creating a selector to define criteria for choosing a server
Servers and Authentication	Creating servers and login credentials for servers
Blog Exercise	Review: create projects to start new blog and manage passwords
