

Island Training Announces New Workshop and Test Drive for IBM® DevOps Tools *RTCz and DNG Added to Island's Free Hands-on Enablement Programs*

IBM RTCz Workshop for z/OS Programmers

A three-hour hands-on workshop is now available for RTCz. In this workshop, developers will learn to use Team Concert in a z/OS enterprise environment.

Designed for mainframe programmers, the workshop focuses on tool usage at a basic level. It does not include advanced topics or tool configuration.

"Island supports many global enterprise deployments to RTCz teams, so it was natural to offer these mini enablement sessions to z/OS programmers," said Jim Herron, co-founder and chief technology officer of Island Training Solutions. "The workshop is ideal for companies interested in evaluating RTCz as a solution for their enterprise teams, as well as for novice tool users."

Workshop topics include:

- Navigating the Eclipse® environment
- File modification
- Source control basics
- Enterprise build and deploy functions.

Following this workshop, developers will have a basic knowledge of Team Concert source control usage, as well as familiarity with the Eclipse user interface. No previous RTC experience is required, but participants should be proficient with the IBM z/OS mainframe development environment.

Island Training's free hands-on workshops give IT professionals around the globe an opportunity to learn basic functionality of IBM Jazz tools. Participants connect—from their own desks—to Island Training's virtual classroom for a remote, hands-on class led by an expert Island instructor. To register for a free workshop, go to <http://www.islandtraining.com/rational-team-concert-systemz.html>.

New Test Drive: IBM DOORS® Next Generation

Test drives are now available for DOORS Next Gen (DNG), which joins monthly regulars Team Concert (RTC) and Quality Manager (RQM). DNG is a requirements management tool that seamlessly integrates with RTC and other IBM DevOps tools.

Island Training's free test drives are designed to let IT professionals see for themselves the capabilities of IBM Jazz tools. Participants connect to Island Training's virtual classroom for a remote, hands-on session led by an expert Island instructor. To register for a free test drive, go to www.islandtraining.com/test-drives.html.

"The workshop is ideal for companies interested in evaluating RTCz as a solution for their enterprise teams, as well as for novice tool users."
